

More filled appointments. Less time chasing replies.

Lena and Carla currently coordinate Square, a spreadsheet, and texts. Separate replies have left two clients believing they had the same slot.

8–12

late cancellations each week

~3

currently refilled

≥50%

Lena's refill target

Customer estimates and target, not measured prototype results. Source: Lena interview, turns 4 and 9.

An acceptance holds the spot

Staff complete the booking in Square before recording confirmation.

01 Match the waitlist

Service, duration, stylist, time, and permission to contact.

02 Offer one at a time

Earliest eligible client gets an exclusive 15-minute offer.

03 Hold, then confirm

Lena or Carla updates Square.

The process remembers where it left off

Temporal keeps the offer, its deadline, and the booking hold durable.

Verified in this prototype

A Worker was forcibly stopped and restarted.
The same offer and deadline survived.

Expired replies are rejected.
Repeated acceptance cannot create another hold.
Failed delivery advances; temporary failure retries.

Staff remain in control

A question does not extend the deadline.

A held slot stays reserved until staff confirm, release, or withdraw it.

The activity journal shows what happened
and what needs attention.

Evidence: worker-recovery.json, temporal-workflow.jpg, and the automated workflow tests in the repository.

A small, supervised pilot

What this demonstration includes

A working local Temporal process.
Fictional waitlist and simulated texts.
One active opening at a time.
Manual Square confirmation.

Quick demo: 20-second offers.
Standard mode: 15-minute offers.

Before contacting real clients

Connect the waitlist and SMS provider.
Add staff sign-in, consent records, and
booking reconciliation with Square.

Then Lena and Carla try a two-week pilot.
Track confirmed refills / eligible openings,
staff follow-ups, and booking conflicts.

Decision: aim for $\geq 50\%$ refilled, fewer manual checks, and no conflicting booking promises. Results are still to be measured.
